

Sign in and start the shift

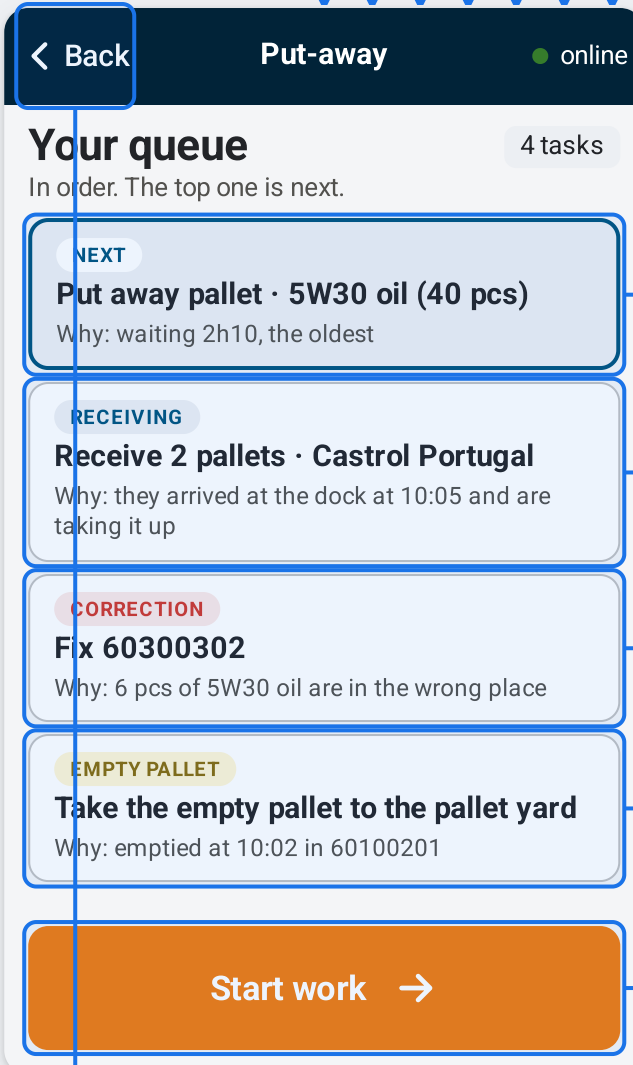

The person signs in, sees what there is to do and starts. The engine has already chosen the next task.

01 - Sign in
Identify who is using the PDA, with username and password.

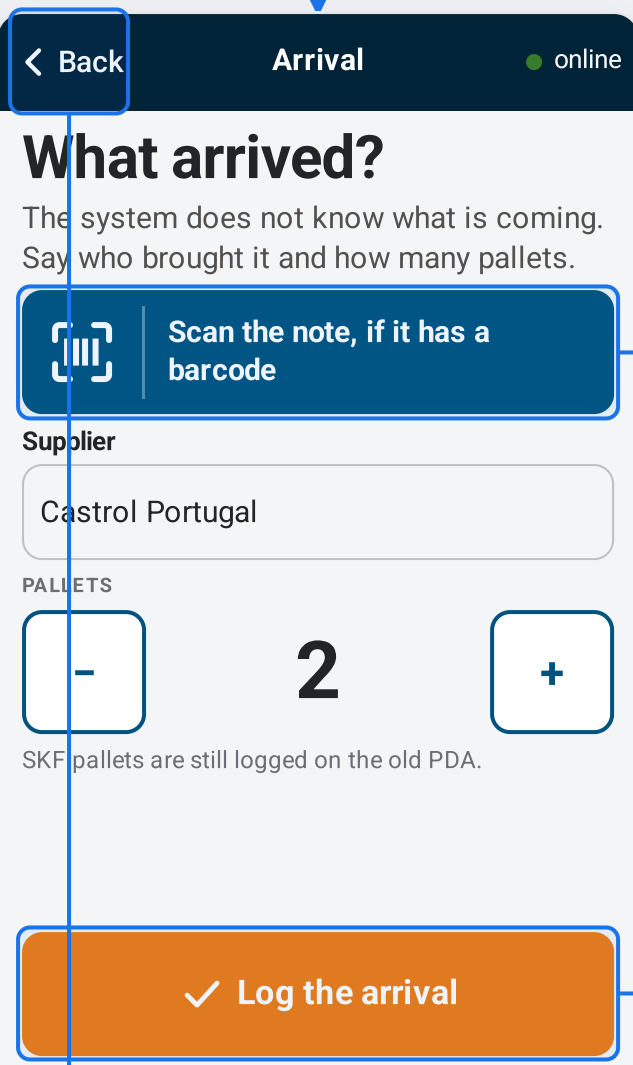

02 - Put-away home
Show the shift's work and get the person working with one tap; give access to the task up and down they do on their own initiative.

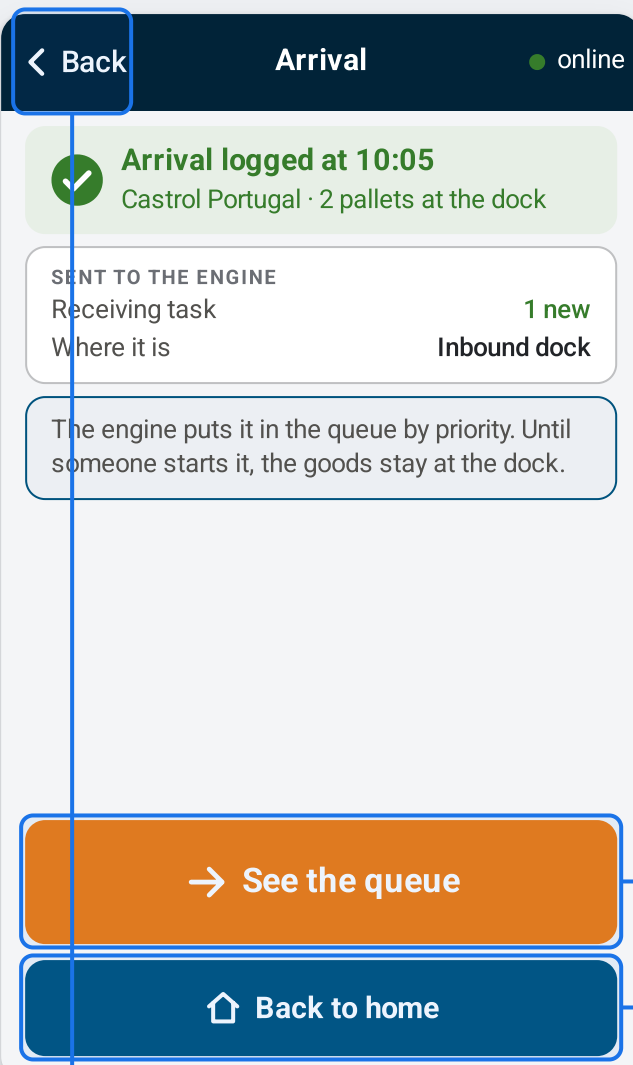

03 - The queue, with the why
Show the tasks in order, and why each one is where it is.

Receive what arrives

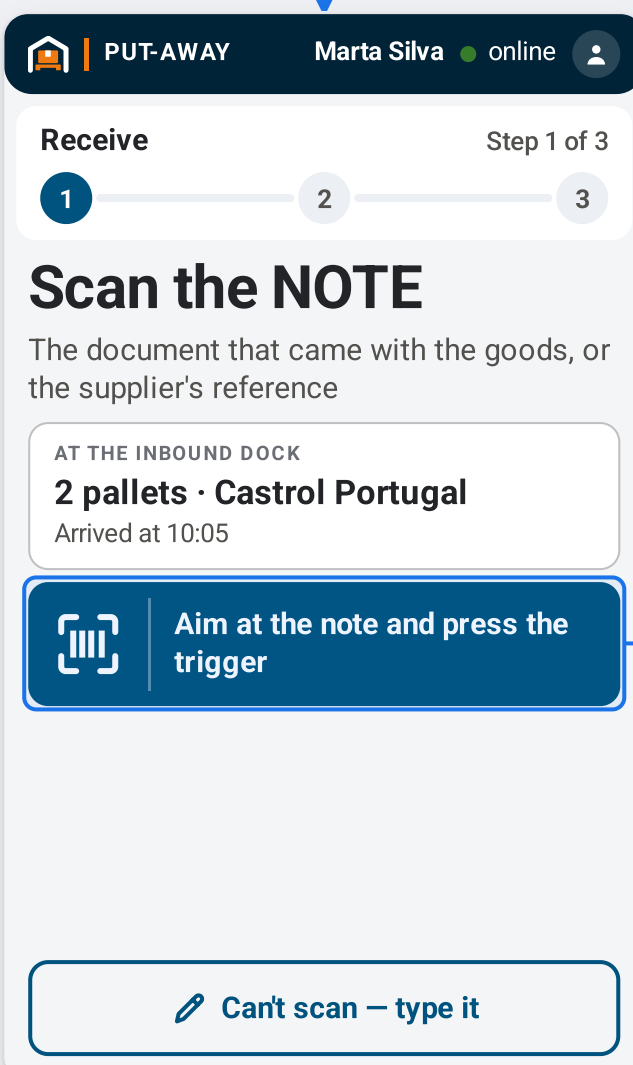

The system does not know what is coming, when goods reach the dock, put-away logs the arrival. That creates the receiving task, which the engine puts in the queue by priority. It is checked against the supplier note, goes into stock, and the put-away tasks go back to the engine.

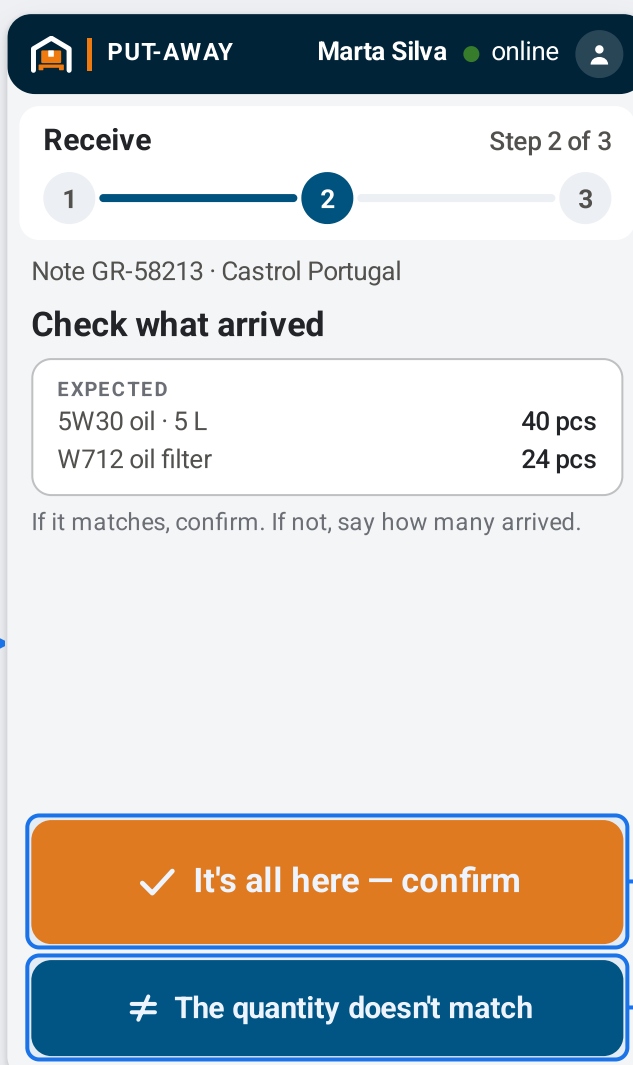

04 - Log the arrival
Log the arrival: the system does not know what is coming, so this is where the goods enter the system.

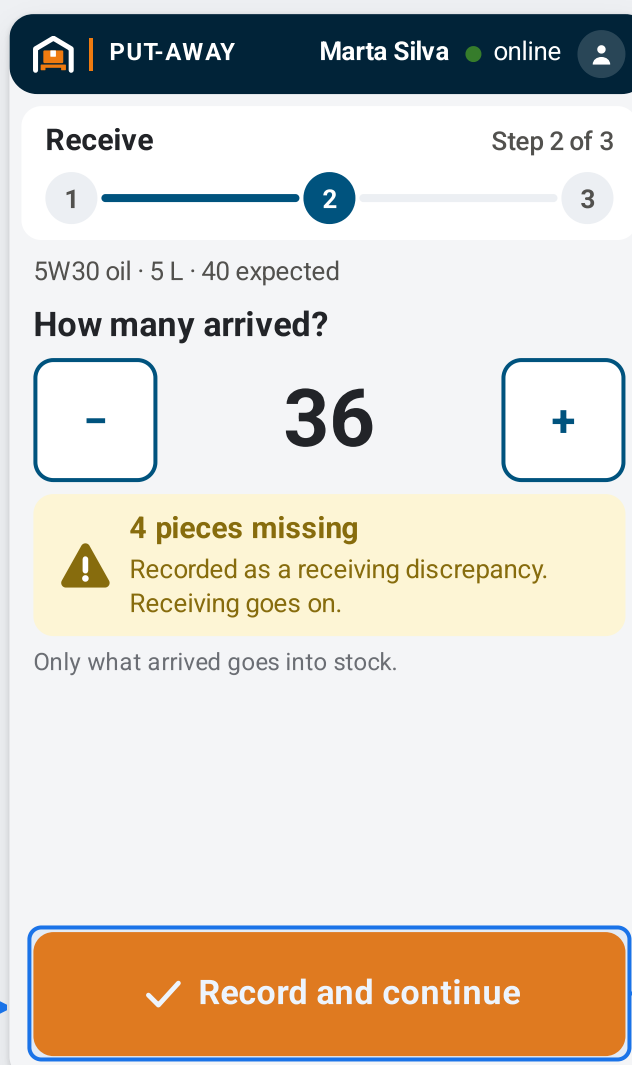

05 - Arrival logged
Confirm the arrival is logged and the receiving task went to the engine.

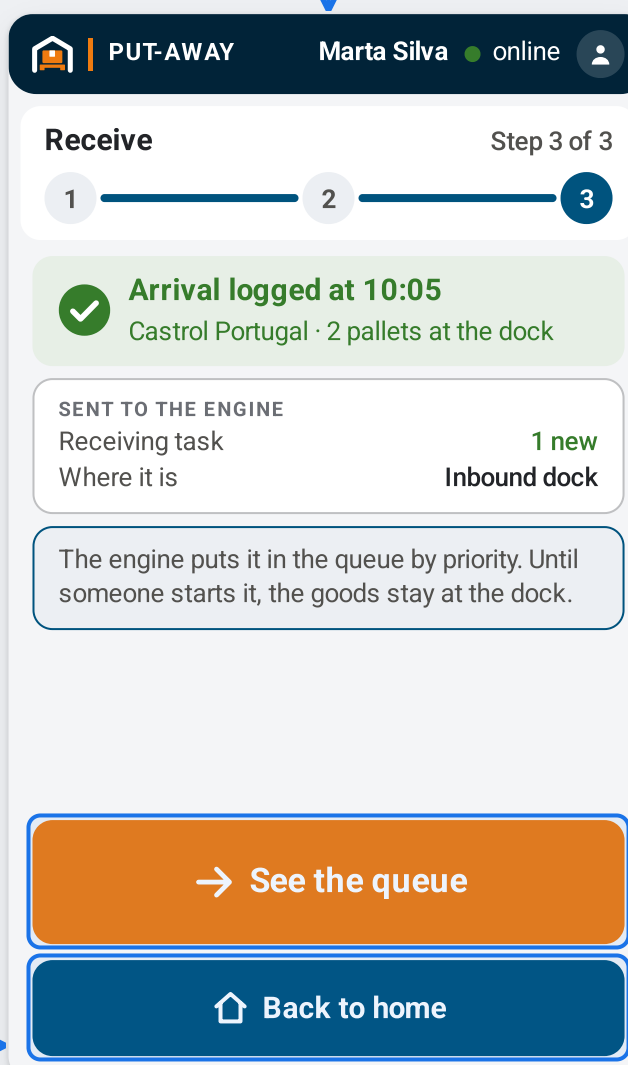

06 - Scan the supplier's delivery note
Start the receiving task: identify the delivery by the supplier's note.

07 - Check what arrived
Compare what was expected with what arrived.

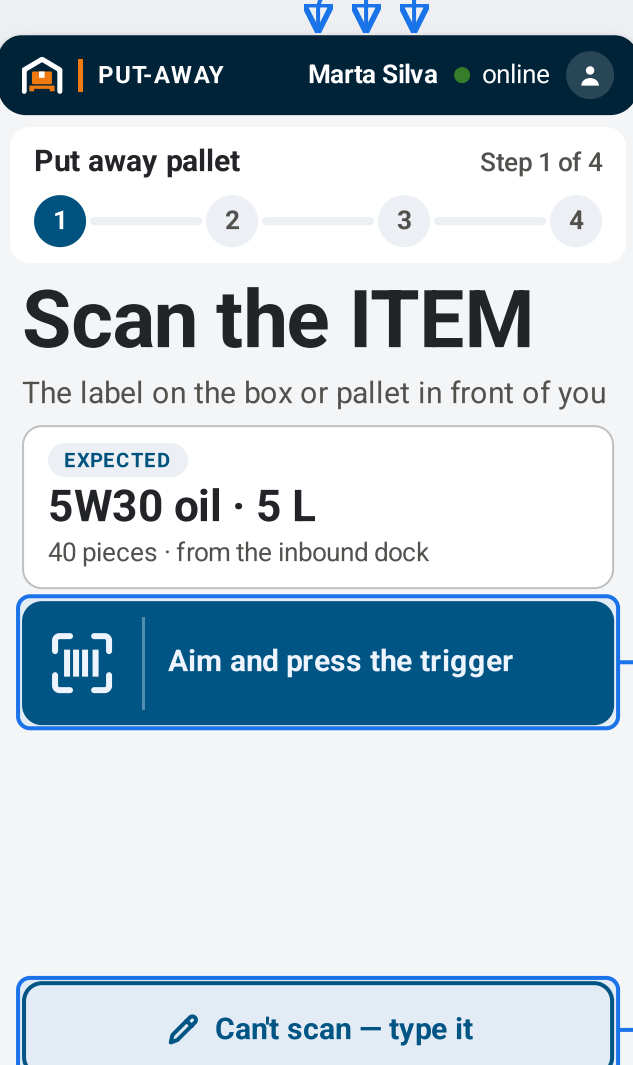

08 - The quantity doesn't match
Record how much actually arrived, when it isn't what was expected.

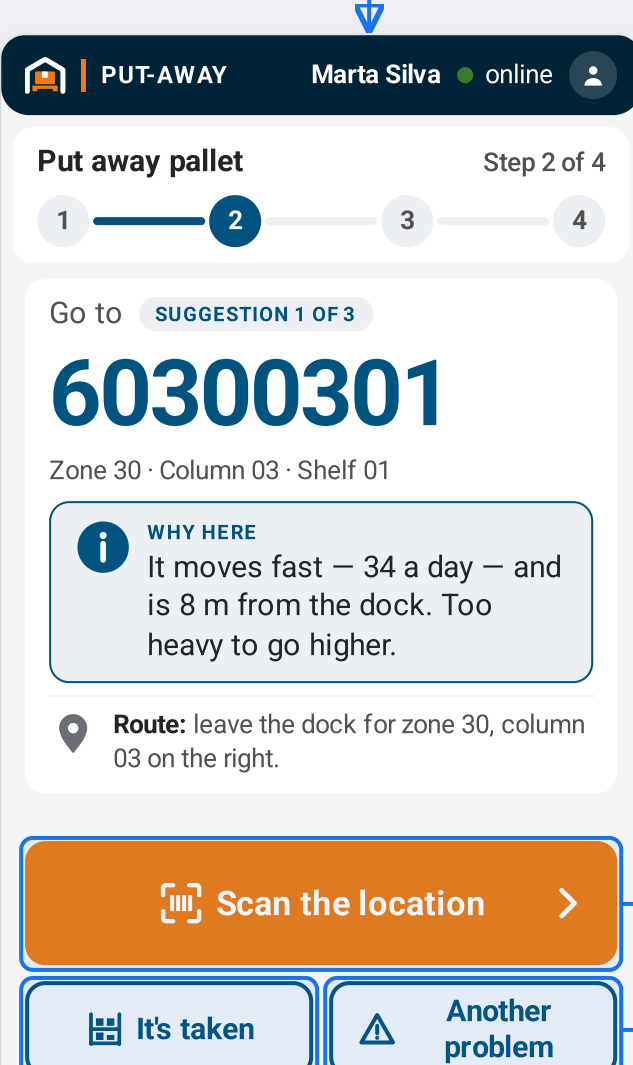

09 - Received
Confirm it is in stock, and that the put-away tasks went to the engine, which sets that priority in the queue.

Put away a pallet

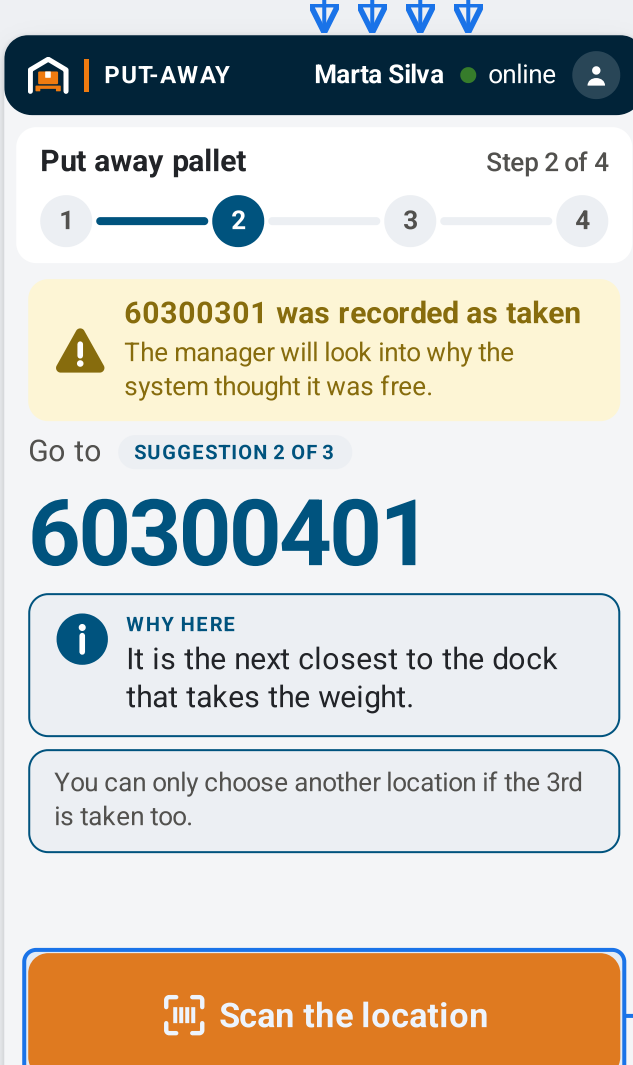

Take the pallet from the dock to the location the engine suggests, and confirm by scanning the item and the location.

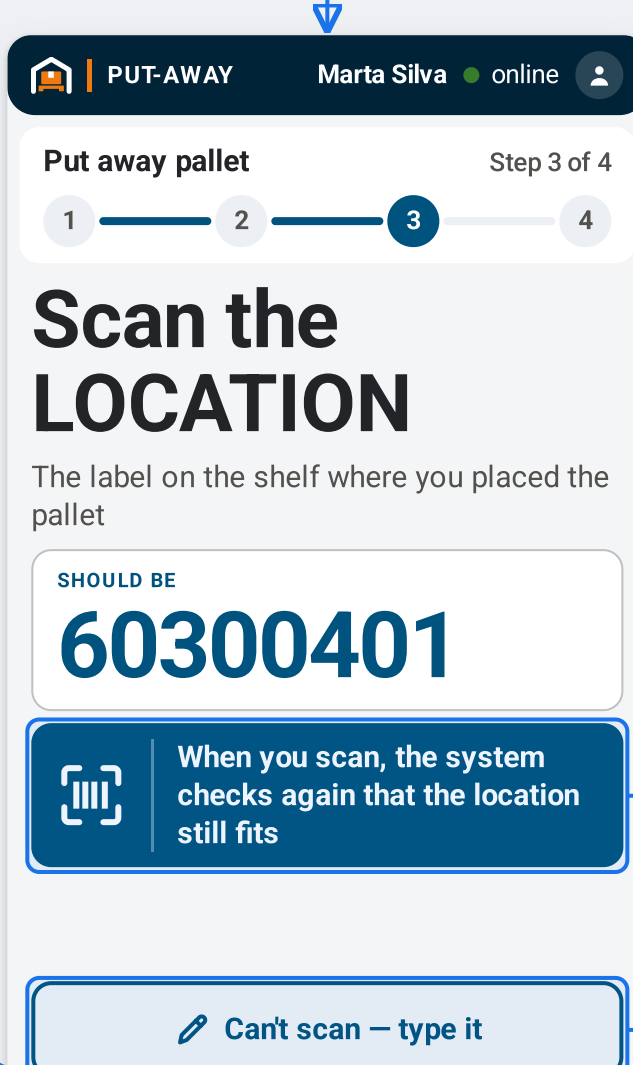

10 - Scan the item
Confirm that the pallet in front of the person is the one in the task.

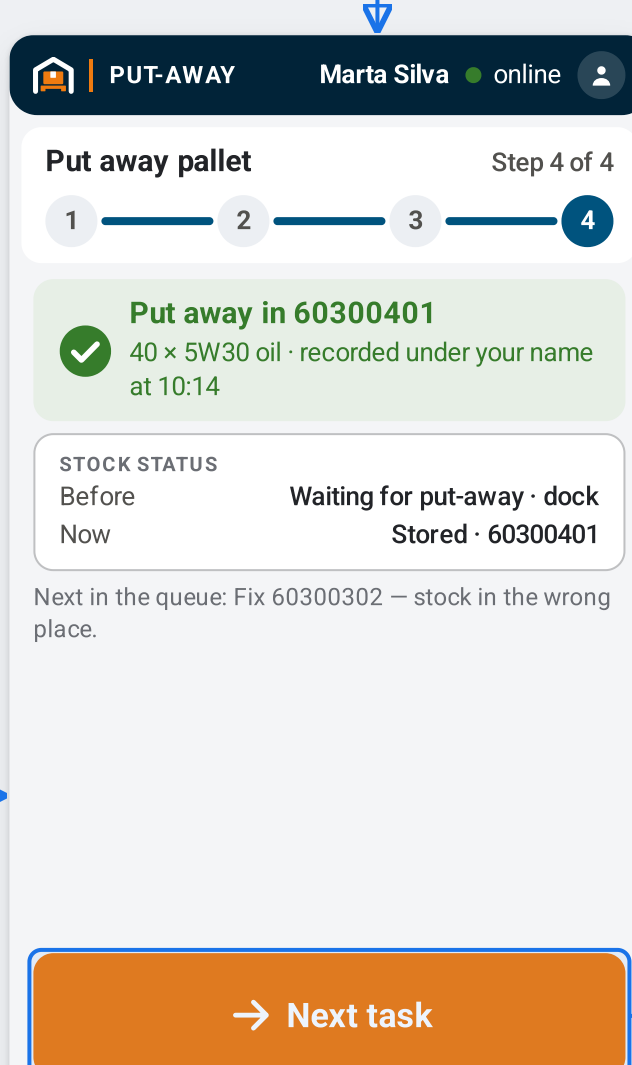

11 - Go to suggestion 1 of 3
Say where to take the pallet, and why.

12 - Number 1 was taken
Record the location as taken and move on to the next suggestion.

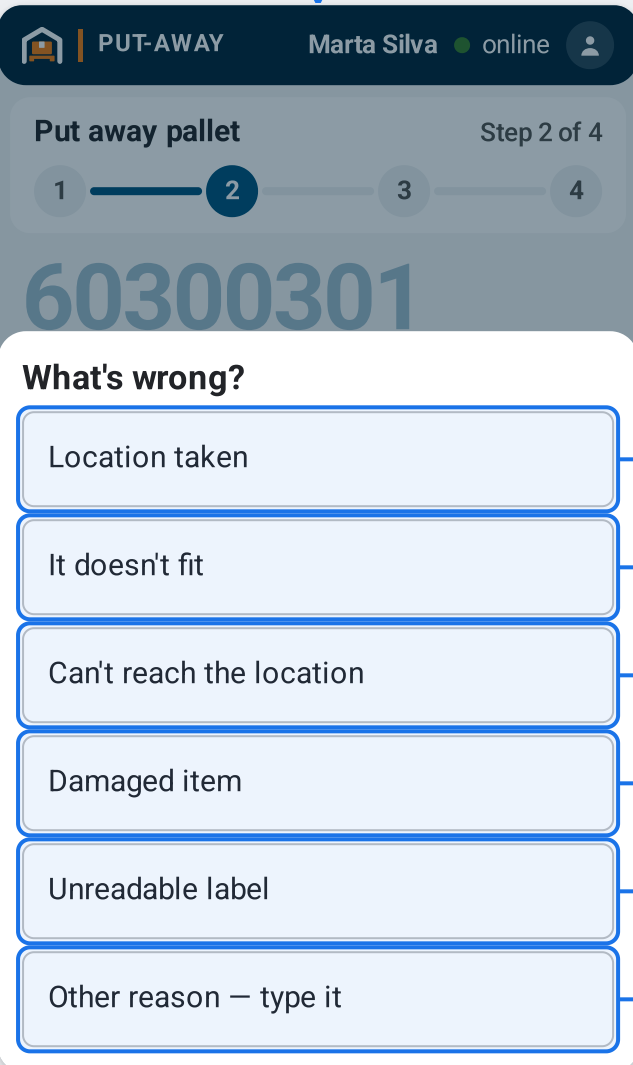

13 - Scan the location
Confirm, by scanning, that the pallet is in the right location.

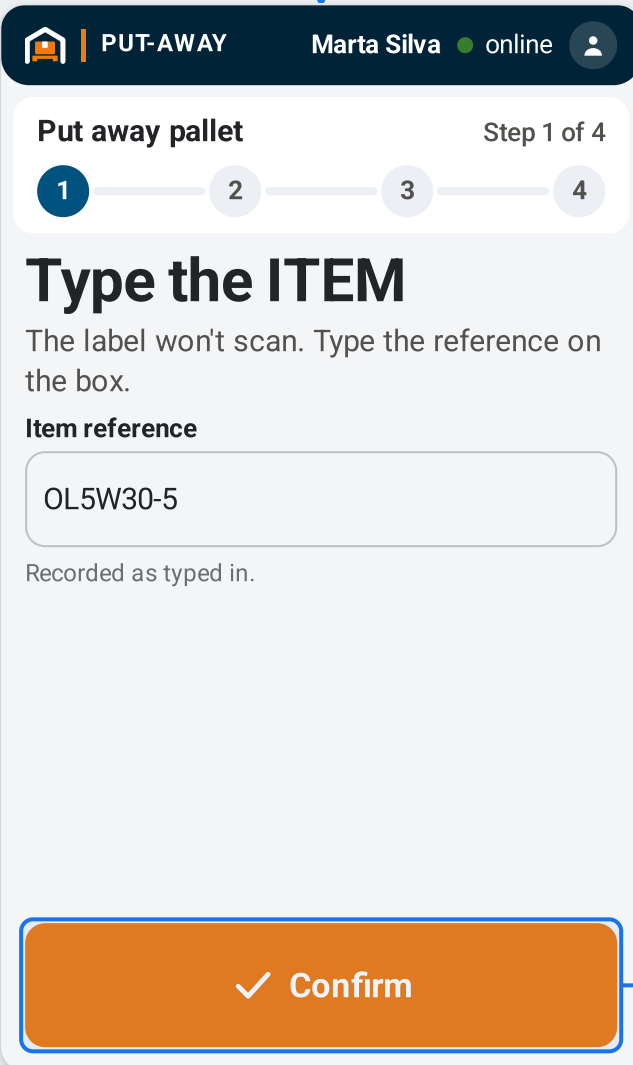

14 - Put away
Confirm the record and move on to the next task.

When put-away goes wrong

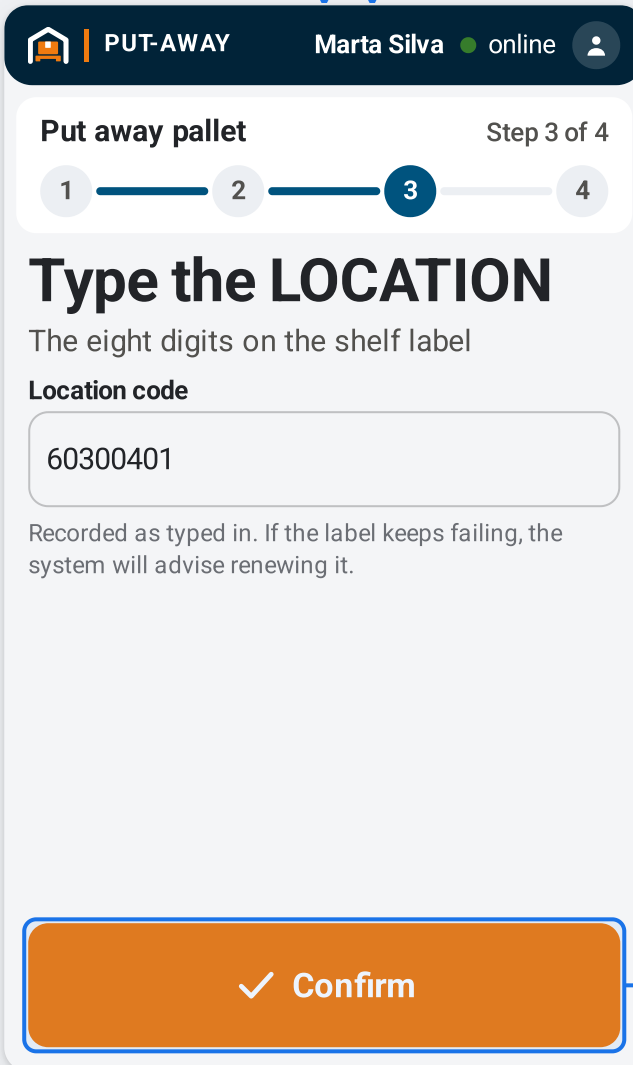

The detours - location taken, doesn't fit, damaged item, label that won't scan. Everything is recorded and the manager sees it.

15 - What's wrong?
Say, with one tap, what is stopping the put-away.

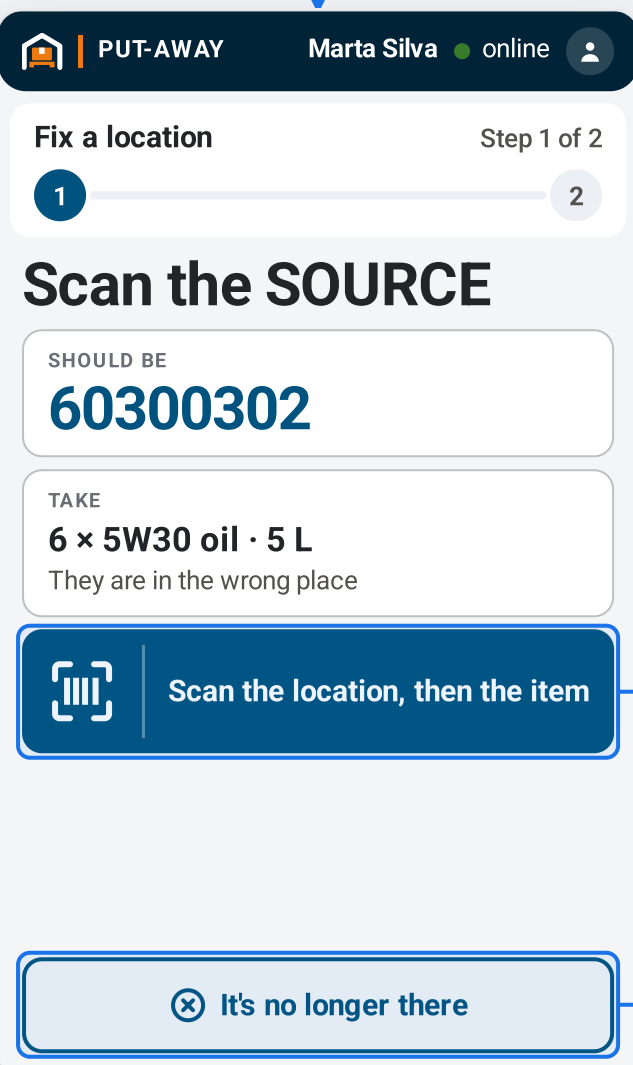

16 - Type the item
Identify the item when the label won't scan.

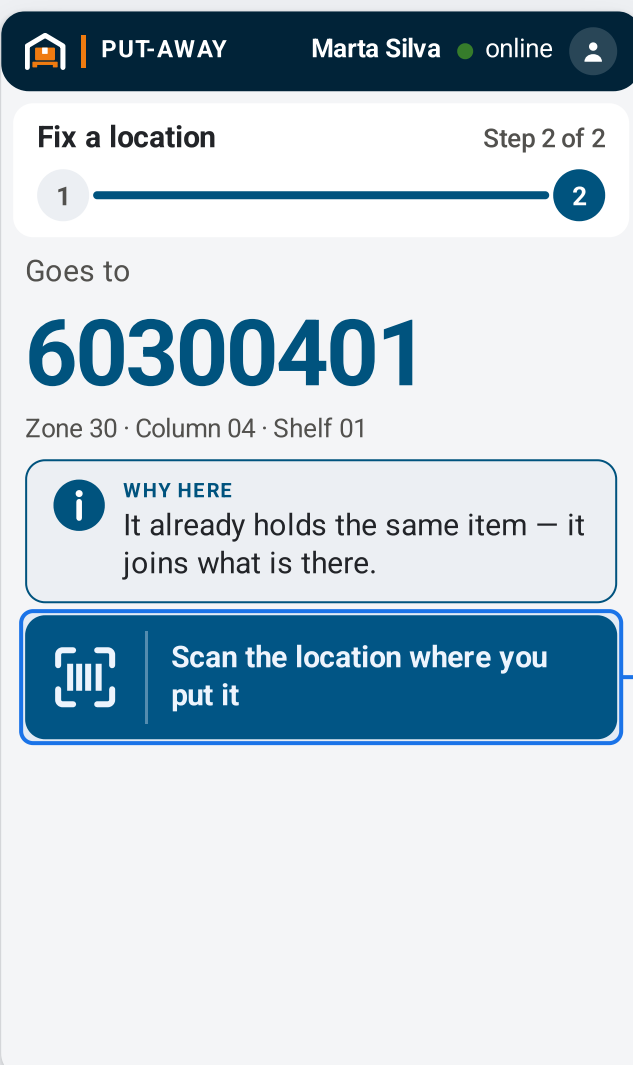

17 - Type the location
Identify the location when the label won't scan; counts towards achieving a new label.

Fix a location (task)

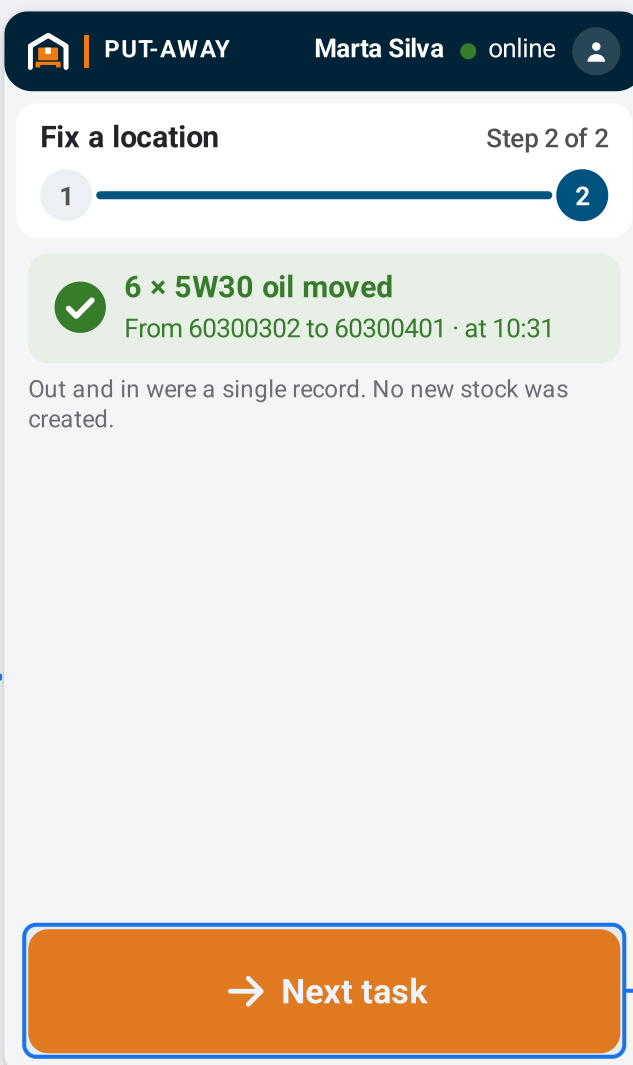

The engine found stock in the wrong place and has it moved. It comes out of the source and goes into the destination, in a single record.

19 - Take from the source
Confirm the location and the item that come out.

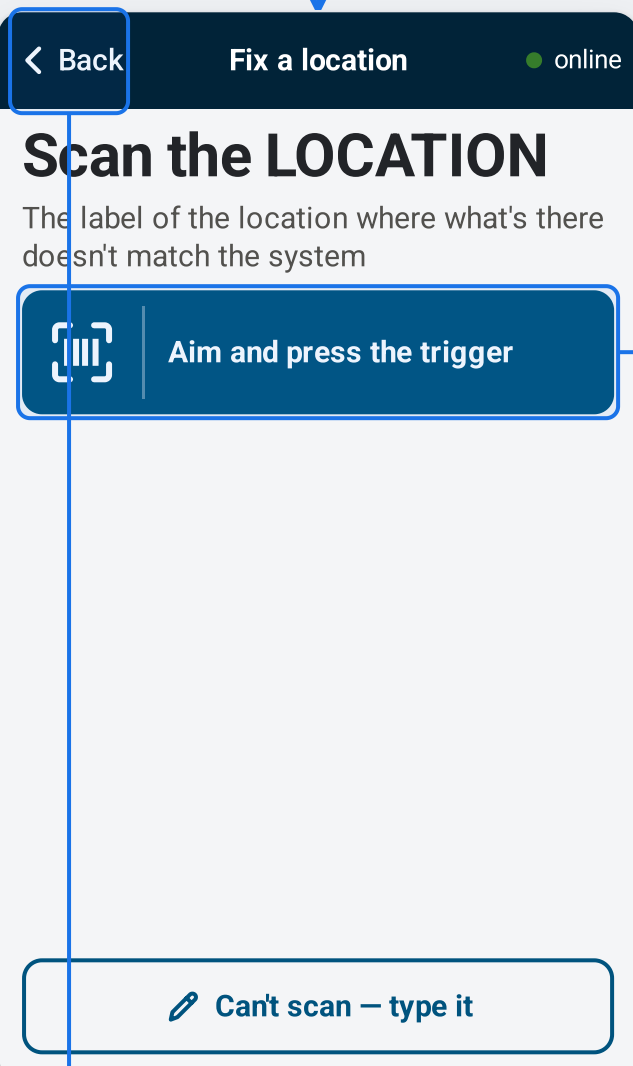

20 - Put in the destination
Say where the stock goes, and confirm by scanning.

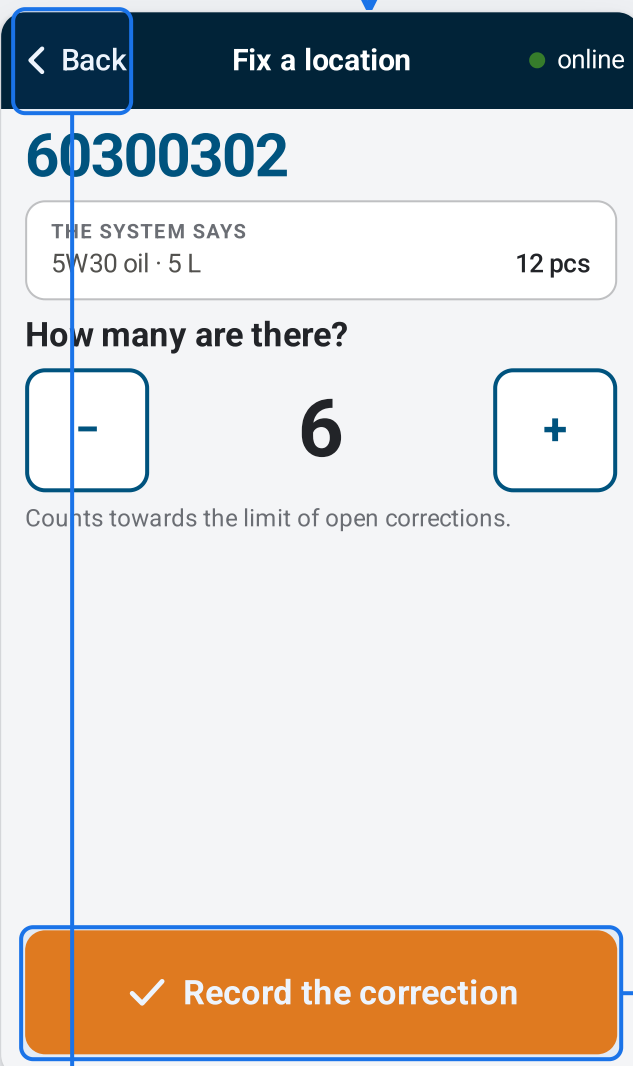

21 - Fixed
Confirm the stock has moved, in a single record.

Fix what is in a location

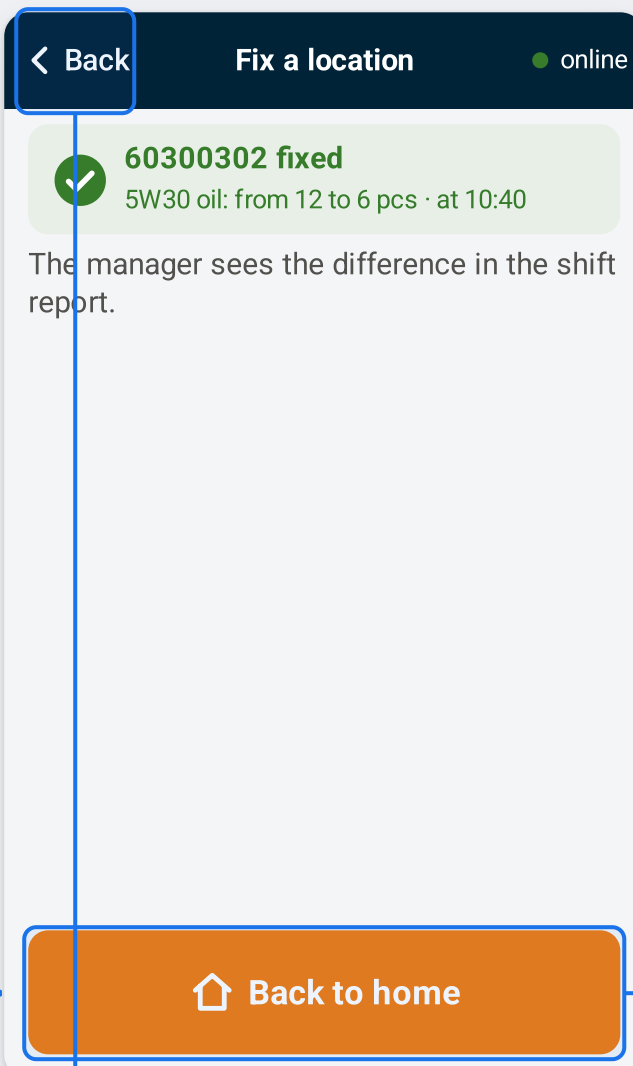

On their own initiative, whoever sees a location doesn't match the system fixes it right there. Nobody counts.

22 - Scan the wrong location
Identify the location that doesn't match the system.

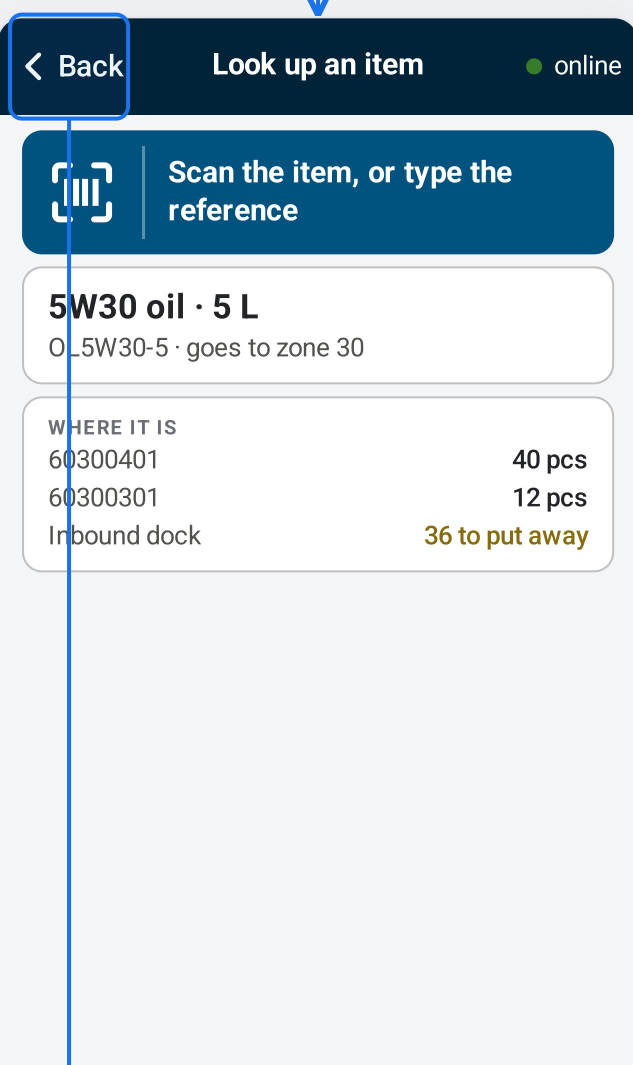

23 - What's there?
Say how many pieces are actually in the location.

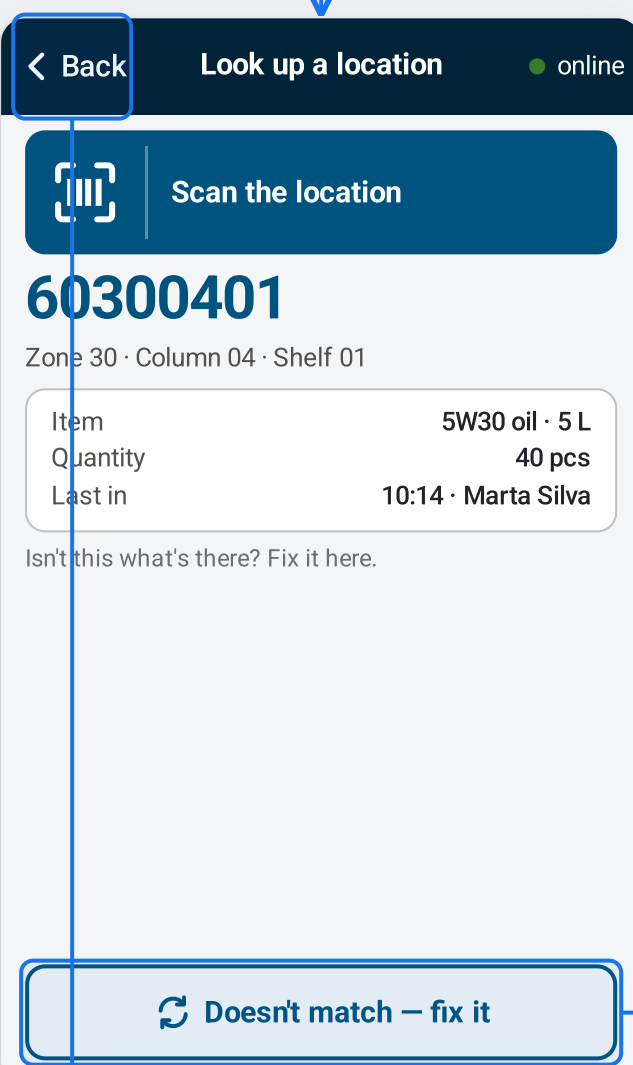

24 - Correction recorded
Confirm the correction; the manager sees the difference.

Look up

Find out where an item is, or what is in a location, without changing anything.

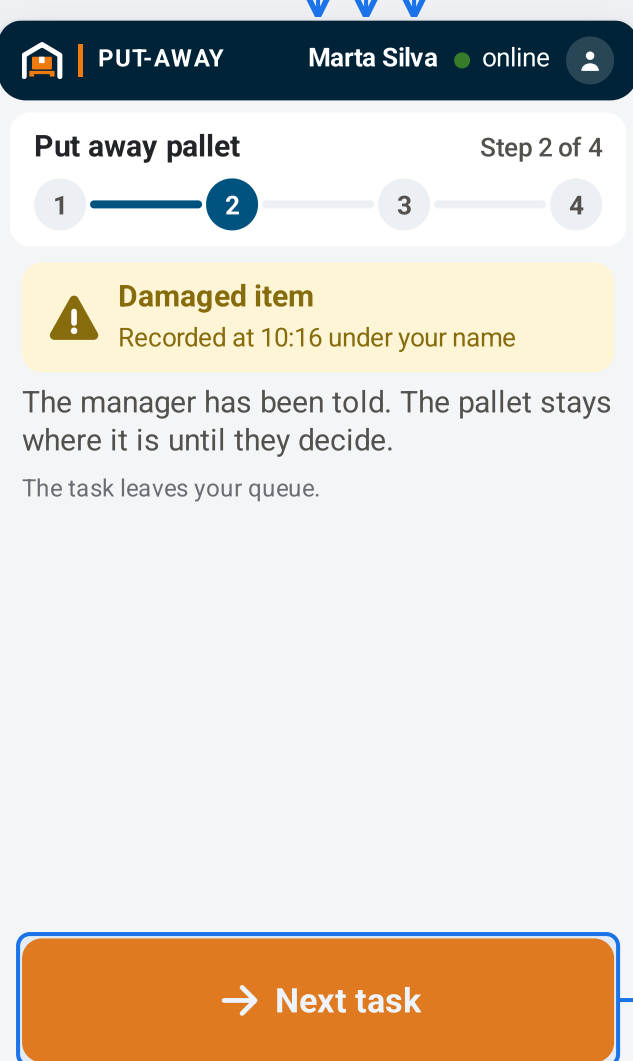

27 - Look up an item
See where an item is, and how much is in each place.

28 - Look up a location
See what is in a location and, if it doesn't match, fix it.

Report a problem

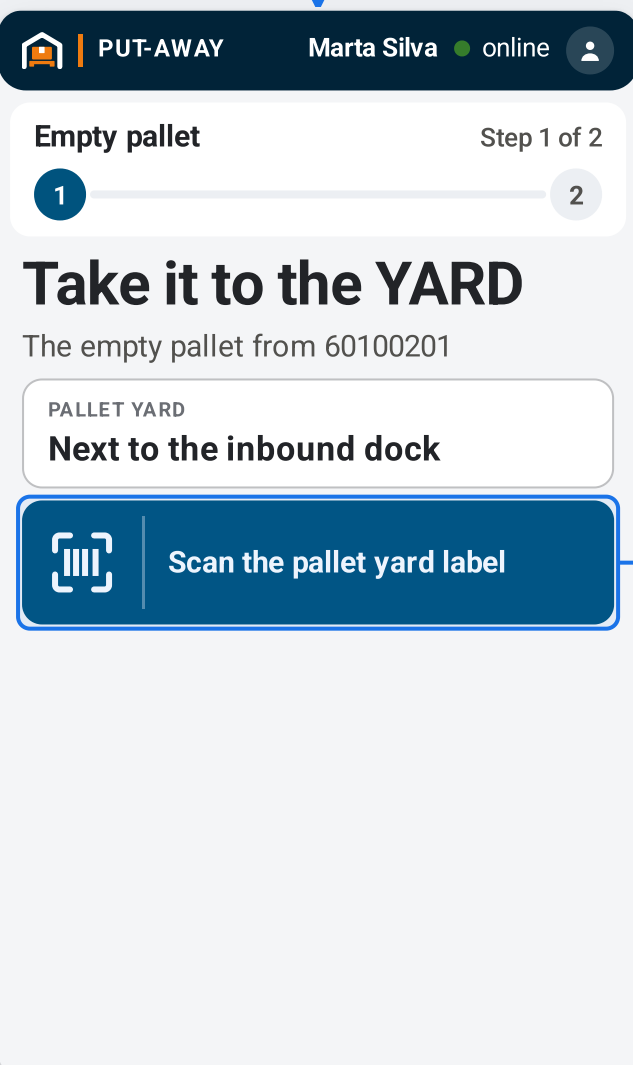

Any role reports what is stopping them: it is recorded with who said it and when, and the manager is told.

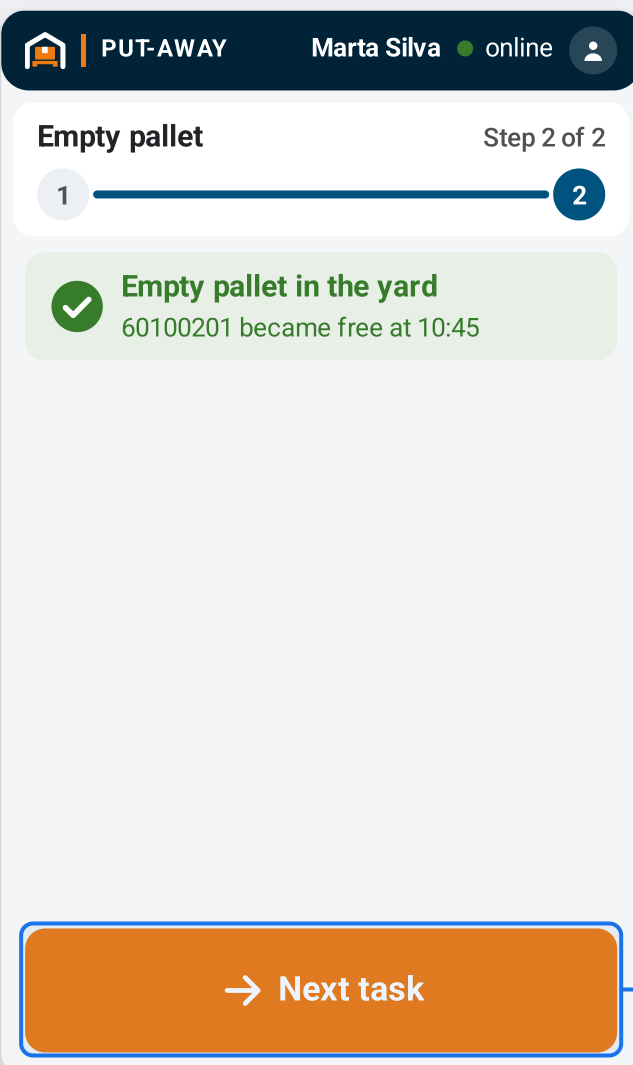

18 - Problem recorded
Confirm the problem is recorded and the manager has been told.

Take the empty pallet away

The pallet that became empty leaves the location and goes to the yard; the location is freed.

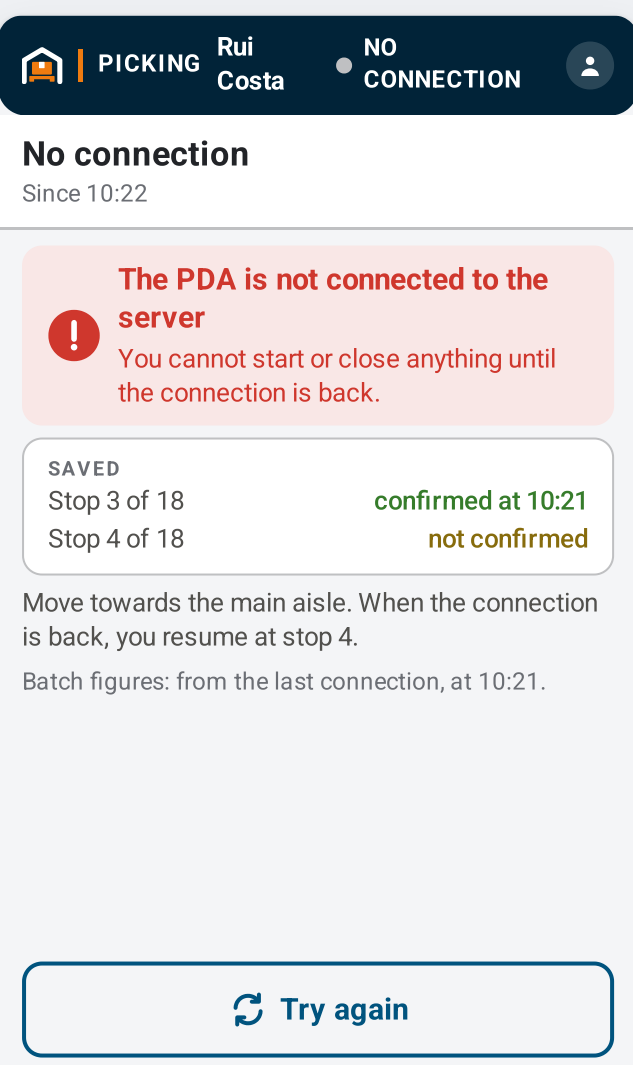

25 - Take it to the pallet yard
Take the empty pallet to the yard, and confirm by scanning the label.

26 - In the pallet yard
Confirm the location is now free.

When the connection drops

The PDA works connected to Robinet. With no connection it says it stopped, and shows what was saved.

12 - No connection
Say the PDA isn't connected, and what was saved.
